

Every answer is written from the repository as it stands on **2026-09-03**, not from the slides. Where the slides and the code disagree, **the code wins and Part 0 records the disagreement**.

The documents

#	File	What it covers
0	00-slide-audit.md	Read first. Nine things on the submitted PPT that are wrong, unbuilt, or contradicted by our own code — with the corrected wording for each
1	01-positioning-and-app-ux.md	Why the app exists against IndiaHandmade · demand-side gap · Capacitor · voice-first · shared phones · online-first · app size · our worst screen
2	02-feature1-image.md	PS Feature 1 · BiRefNet benchmark · the 591-fixture calibration · the missing colour stage · latency profile · single-GPU capacity · enhancement vs misrepresentation
3	03-feature2-voice.md	PS Feature 2 · the unbuilt vision pre-fill · Bhashini risk · dialects · SEO claim · cost-DoS · what leaves the country · prompt injection
4	04-feature3-pricing.md	PS Feature 3 · why there is no ML model · the floor as ethical core · self-reported labour hours · thin comparables · GeM discount math
5	05-channels-and-linkage.md	What "one tap" really means · the 10,700-category GeM story · GST Notification 34/2023 · ONDC MSN · autofill legality · the GeM order gap · inventory races
6	06-scalability-and-privacy.md	What breaks first, in order · demo-day surge math · multi-tenancy · booleans-only storage · DPDP dates · observability · QC · counterfeits · blockchain
7	07-impact-and-hardest-questions.md	Adoption without field agents · proving income · who pays · RTO · the cut line · the five questions we would struggle with
8	08-costing-unit-economics.md	Costing A — measured basis · workload model · per-product marginal cost · GPU vs per-image API · the ASR variable
9	09-costing-buildout.md	Costing B — four deployment scales · buy vs rent · the lines bigger than the servers · TCO · ten cost-reduction levers · procurement verify

#	File	What it covers
		list

Each is also generated as `.docx` and `.pdf` in this folder.

Answer format

Every question follows the same four beats, so an answer can be given under pressure without losing the thread:

- **Think** — the reasoning, out loud, before the answer
 - **Today** — what the code actually does, cited by file
 - **At scale** — what changes, and what it costs
 - **Breaks when** — the honest failure condition
-

The three numbers to have memorised

0.1%	IndiaHandmade onboarded 4,186 artisans in three years against ~35 lakh handloom workers. The storefront was never the bottleneck
10,700+	GeM product categories. An artisan cannot navigate them; an entire consultancy industry exists because most sellers cannot either
₹136	Cost per artisan per year at national scale — ₹76 if GeM ships an order API

The four sentences that carry the pitch

1. *"The government already built the storefront. It didn't scale, because getting a product ready to be listed is the actual work — and that is what we automated."*
 2. *"One tap is tiered and we will tell you which tier each channel is in. A flat claim does not survive an industry judge; knowing which Indian platforms have APIs and which do not is the product."*
 3. *"Pricing is arithmetic, not a model — because no training data exists for what a handicraft should cost, and every number has to survive 'how did you get that?'"*
 4. *"Our largest cost is not compute. It is a human reading the GeM dashboard, because GeM has no order API — and one MoU removes ₹6 crore a year."*
-

Standing rules for the room

- **Never claim a channel is live when it returns `dry_run`.** Our own code says it: *"a demo claim that outruns the code is how you lose the room."*
- **Name the limit before the judge finds it.** Every gap in this pack has a true statement that is more impressive than the false one it replaces.
- **Nothing unverified goes on a judged slide.** The verify lists are §18 of the Master Technical Reference and §8 of Costing Part B.
